

# Free PFAS Livestock Product Testing

**Sign Up By February 27, 2026.**

Sample collection on Sunday, March 8 and Monday, March 9. Home pickup available.

In our previous 3 rounds of sampling, we found PFAS in eggs laid by backyard hens and ducks who drank PFAS-contaminated water. We also found PFAS in home-raised meat. We recommended some families eat less of their home-raised eggs and meat because of the PFAS levels.

## What We Can Do:

- Test your home-raised eggs or meat for PFAS.
- Re-test eggs or meat for past participants to check that the actions you took lowered PFAS levels in your food.

## What You Get:

- Your test results.
- A free consult on your test results from Washington State Department of Health (DOH), including advice on the safety of eating the meat or eggs.

## To Qualify, You Must:

Live in the West Plains area and have PFAS in your water higher than at least one of these values:

- PFOS: 4 ppt or ng/L
- PFOA: 4 ppt or ng/L
- PFHxS: 10 ppt or ng/L
- PFNA: 10 ppt or ng/L

Use the contaminated water to raise animals or eggs at home for yourself, your family, or friends to eat (not commercial production).
